Gaurinath Subash

gpsubash@ncsu.edu | linkedin.com/in/gaurinathsubash | github.com/GauripSubash | Apex, NC

EDUCATION

North Carolina State University **Expected Graduation: May 2028**
B.S. in Computer Science, GPA: 3.6 Raleigh, NC

TECHNICAL SKILLS

Coursework: Data Structures and Algorithms, Software Engineering, Web Application Computing, Operating Systems
Languages: Java, Python, C++, C#, JavaScript, TypeScript, SQL, HTML, CSS, R
Frameworks and Data: ASP.NET Core, AngularJS, React, PostgreSQL, RabbitMQ, REST APIs
Tools: Git, GitLab CI/CD, Docker, Jira, Postman, New Relic, ServiceNow

WORK EXPERIENCE

Software Engineering Intern May 2026 – Aug. 2026
Direct Supply Durham, NC

- Reduced service-provider status inquiries by 20% by adding technician check-in timestamps to email and SMS notifications across C# ASP.NET Core microservices and event-driven handlers.
- Delivered 5+ AngularJS and API workflow enhancements with 15 integration test scenarios, validating client requests, API responses, and error states before production releases.
- Cut deployment failures by 20% by upgrading production microservices to .NET 10, validating Docker builds in GitLab CI/CD, and running regression checks during 2-week Agile sprints.
- Reduced hourly-partner time entry by 30% by building a team hackathon Chrome extension that connected browser controls to the Workday API for faster shift submissions.

IT Student Technician Aug. 2025 – May 2026; Aug. 2026 – Present
North Carolina State University Raleigh, NC

- Checked technology in 10 classrooms each week and diagnosed AV, Windows, and macOS issues to keep teaching equipment ready for faculty before scheduled lectures and events.
- Resolved 15–25 classroom incidents weekly through on-site troubleshooting and clear explanations to faculty; recorded fixes in ServiceNow to support team follow-up and knowledge sharing.

Data Science Intern Jul. 2023 – Jan. 2024
David Kane's Data Lab Remote

- Authored 75+ hands-on R and HTML tutorials using census data, explaining statistical techniques to beginner learners through written examples, reproducible code, and visualizations.
- Developed 40+ interactive exercises and visualizations to help learners inspect datasets, test assumptions, and communicate analytical findings in hands-on tutorials for new students.

PROJECTS

TraceDeck | Java, Spring Boot, React, PostgreSQL Sep. 2026

- Built a full-stack event investigation tool with 4 Spring Boot REST endpoints, filtering synthetic service events by source and time in PostgreSQL and presenting incident timelines in React.
- Added 24 automated Java tests and a GitHub Actions CI workflow, validating event ingestion, pagination, and malformed payloads with repeatable checks before each deployment.
- Reduced median investigation time by 35% on a 100-event local benchmark by grouping related failures and showing preceding events alongside request details in one view.

Ramp | React, TypeScript, Express | Team Hackathon Aug. 2026

- Co-developed a developer onboarding app that parses Git repositories to generate 20+ technical assessments per repository run, helping new contributors explore code through targeted challenges.
- Built React and Express features to run code checks and grade spoken explanations through browser audio and speech-to-text APIs, returning structured rubric feedback in under 1.5 seconds.

Story Point Estimator | Python, NLP | Team Project May 2025 – Jun. 2025

- Processed 500,000+ issue records in a Python pipeline and trained logistic regression and Naive Bayes models to predict effort from ticket text and inform sprint planning.
- Reached 82% classification accuracy on 2,000+ issue logs, then reviewed results with a graduate mentor and 2 peers to refine model features and explain prediction limitations.
